**Continue**

I was trying to upload a letter of recommendation file for one of the medical students I worked with, and because the file size was greater than 500 kb, I couldn't. Luckily, I found this article, used the tools online, and instantly got the file shrunk! ... more It was the fastest way to reduce the size of some of my PDF files. This is not something I have to do often, it happens once a year. Only here I found the quick help. Thank you! ... plus this is an amazing service. I had a 7 MB file that I needed to reduce the size. SmallPDF.com reduced it to 214 KB. Super service. I recommend this software to everyone. ... plus The idea that printing it with such a PDF printer can reduce its size. I didn't use the converters mentioned here, I used Foxit Reader, and it worked too. ... I never knew more about this preview feature. It took me to other useful preview features as well, such as PDF converter, encryption option, black and white, etc. ... plus My friend on Windows needed some help with this problem and I was able to give him these options. I'm sure one of them will work. Thank you. ... more I spent a lot of time trying to reduce the size of my PDF, but I couldn't. wikiHow it led me to the solution. Thank you very much for providing these helpful tips/ways of this type. It's really helpful! Thank you. I couldn't figure out how to make a smaller PDF file on a Mac. I followed the steps to reduce the size of a PDF file using Preview on Mac and it worked! The file size was too large. This guide was extremely helpful in sorting the problem. I used the small PDF page and it worked very well, thanks for the advice!! Amazing. All in one information, at a glance. Lovely to see. It's amazing to see so many options available on a single page. The description of each step of the process helped. This helped reduce the size of the PDF file! Thanks to wikiHow, always helpful. I solved my problem. Thank you! Highly recommended This helped me very well. Learn how to compress PDF files to reduce file size with Adobe Acrobat DC on Windows or Mac. So you'll need a sample file to practice (ZIP, 22.5 MB) To reduce the size of your PDF file, open the Optimize PDF tool. You can access this tool from the Tools Center. Click the Tools tab at the top left, scroll down until you see the Optimize PDF tool, and then select Open from the drop-down menu. In the Open dialog box, select the Spring.pdf sample file from the local magazine you downloaded or another PDF document that you want to compress and click Open. In the Reduce File Size dialog box that opens, choose File Version Compatibility from the menu options For the Spring.pdf sample file in your local magazine, keep the default Keep Existing setting. Then click OK. In the Save As dialog box, keep the same file name to overwrite the original PDF with the optimized PDF, or select a new name or location for the compressed file. Then click Learn more about compressing PDF files to reduce the size of the PDF file with the Acrobat file compression tool. Try compressing a PDF with our online tool. Highlighted Mar 23, 2016 0 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/td-p/8184224 Mar 23, 2016 0 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184225#M14442 Mar 23, 2016 0 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184226#M14443 Mar 23, 2016 1 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184227#M14444 Mar 23, 2016 0 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184228#M14445 Mar 31, 2016 1 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184229#M14446 Apr 01, 2016 0 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184230#M14447 Apr 01, 2016 0 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184231#M14448 Apr 01, 2016 0 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184232#M14449 Apr 01, 2016 1 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184233#M14450 Jun 11, 2016 0 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184234#M14451 Jun 14, 2017 1 /t5/acrobat-reader/how-can-i-reduce-the-file-size-of-pdf-in-adobe-acrobat-reader-dc-free-version/m-p/8184235#M14452 PDF , the acronym for Portable Document Format, is a file format prevalent among the officers. For its high compatibility with all devices and strong security, it is convenient to transfer or print. However, have you ever faced such situations: some large PDF files take a long time to open, or to send them to colleagues or friends and the size of the PDF file exceeds the limited value of website attachment uploads? That means you need to compress a PDF file. This post will show you how to reduce the size of the PDF file in Adobe Acrobat Reader DC to help you resolve similar issues. 1. Reduce the size of the PDF file Step 1: Open the Adobe Acrobat DC software, select the Tools tab at the top left and scroll down to find the Optimize PDF tool. Click the Open button to choose a PDF file. Step 2: In the opening dialog box, navigate to the PDF file you want to compress, select it, and then click the Open button. Step 3: After opening the PDF file, click the Reduce File Size at the top of the file. 4. A dialog box called Reduce File Size appears. Keep the default Acrobat Version Compatibility setting to Preserve Existing. Then click the OK button. You will then be prompted to choose the location where you want to save the compressed PDF file in a pop-up window. Next, Adobe Acrobat Reader starts the process of reducing the size of the PDF file. The image below shows the comparison of the file size between PDF files before and after compressing. 2. Advanced Optimization for PDF File Step 1: Launch adobe Acrobat Reader DC software -&gt; Tools -&gt; click the Open button in the Optimize PDF tool -&gt; open the PDF file, and then click Advanced Optimization as shown in the following image. Step 2: In the PDF Optimizer window, you can choose the panel options: Images, Fonts, Transparency, Discard Objects, Discard Usage Data and Clean to reduce the size of the PDF file. Click OK to choose the storage location, and then start the PDF compression process. In addition, you can click the Audit Space Usage button at the top right and a report of the total number of bytes used for specific document items such as Images, Content Streams, Fonts, and so on is displayed in the dialog box. Notes: You can also try to reduce the size of the PDF file with the Adobe online tool. Acrobat reduces the size of a PDF file without compromising on quality. Acrobat's PDF compression tool balances an optimized file size with the expected quality of images, fonts, and other file content. Quickly reduce the size of an online PDF file. Try now for FREE PDF Optimizer provides many settings to reduce the size of PDF files. Some of the PDF Optimizer settings are comparable to the settings that are available when creating a PDF file with Distiller. Whether you use all of these settings or only a few depends on how you intend to use the files and the essential properties that a file should have. In most cases, the default settings are appropriate for maximum efficiency: save space by removing embedded fonts, compressing images, and deleting items from the file that are no longer needed. Before optimizing a file, it is a good idea to audit the use of file space. Space audit results can give you ideas on where best to reduce the file size. You can also reduce the size of your PDF by using the Reduce File Size command. Note: Some compression methods can cause images to be unusable in a print production workflow. You must experiment with multiple configurations before making changes that cannot be discarded. The PDF Optimizer is not available when Reflow is selected from the View menu. Learn how to compress PDF files to reduce the size of files with Adobe Acrobat DC on Windows or Mac. Space usage auditing provides you with a report of the total number of bytes used for specific document items, including fonts, bookmarks, forms, named destinations and comments, as well as the total file size. The results are reported in both bytes and a percentage of the total file size. Choose File &gt; Save As Other &gt; Optimized PDF or Go to Tools &gt; Optimize PDF, and then click Advanced Optimization. The PDF Optimizer dialog box opens. Click the Audit Space Usage button at the top of the dialog box. Note: You can also audit the space usage of a PDF in the Contents pane. Choose View &gt; Show/Hide &gt; Navigation Panes &gt; Content. De De Options menu in the Contents pane, choose Audit Space Usage. Open a PDF in Acrobat DC. Choose File &gt; Reduce File Size or Compress PDF. Note: Adobe is testing the simplified PDF optimization experience with two different names: Reduce File Size or Compress PDF. Therefore, after upgrading to the latest version, you will see the Compress PDF option or the Reduce File Size option. From a functionality perspective, both options are the same. Choose the location to save the file and click Save. Acrobat DC displays a message showing the correct reduction in PDF size. In Acrobat DC, go to Tools &gt; Optimize PDF. On the toolbar, in the Reduce File Size drop-down list, click Shrink Multiple Files. Note: Adobe is testing the file size reduction experience on the Optimize PDF toolbar with two different names: Reduce File Size or Compress PDF. Therefore, after upgrading to the latest version, you will see the Compress PDF option or the Reduce File Size option. From a functionality perspective, both options are the same. In the Organize Documents dialog box, click Add Files &gt; Add Files. In the Add Files dialog box, select the files that you want to add, click Open, and then click OK. Select the version support you need and click OK. In the Output Options dialog box, specify folder and file name preferences and click OK &gt; &gt; &gt;. To use the default settings, choose Standard from the Settings menu, and then go to step 6. If you change any settings in the PDF Optimizer dialog box, the Settings menu automatically changes to Custom. From the Make Compatible menu, choose Keep Existing to keep the current version of PDF, or choose a version of Acrobat. (The options available in the panels vary depending on this option.) Select the check box next to a panel (for example, Images, Fonts, Transparency), and then select the options for that panel. To prevent all options in a dashboard from running during optimization, deselect the check box for that dashboard. (Optional) To save your custom settings, click Save and name the configuration. (To delete a saved configuration, select it from the Settings menu and click Delete.) When you are finished selecting the options, click OK. In the Save Optimized As dialog box, click Save to overwrite the original PDF with the optimized PDF, or select a new name or location. Note: To optimize multiple documents at the same time, use the Output Wizard. Use the panel options in the PDF Optimizer dialog box to reduce the size of a PDF. The Images panel of the PDF Optimizer allows you to set options for compressing color images, grayscale and monochrome, and reducing image resolution. Change PDF support in the Images panel Pdf Optimizer in Acrobat Pro. Specify the following options, as needed: Reduces file size by reducing image resolution, which involves combining the colors of the original pixels into larger pixels. Note: Masked images and images smaller than 16 by 16 pixels are not reduced. Reduces file size by deleting unnecessary pixel data. In general, JPEG and JPEG 2000 compressions offer better results in images such as photos with gradual color-to-color transitions. ZIP is the best choice for illustrations with large areas of solid color, flat, or patterns formed by flat colors. For monochrome images, JBIG2 compression, which is available in PDF Optimizer but not Distiller, and is superior to CCITT. Available for JPEG and JPEG 2000 formats only. JPEG and JPEG 2000 compression methods are often lossy, a process that permanently deletes some pixel data. You can apply lossy JPEG or JPEG 2000 compression to color images at multiple levels (Minimum, Low, Medium, High, Maximum). For JPEG 2000 compression, you can also specify losslessly so that pixel data is not deleted. Monochrome image compression is lossless, except for JBIG2 compression, which provides both lossless and lossless compression modes. Available for JPEG 2000 format only. Splits the image being compressed into tiles of the specified size. (If the height or width of the image is not a uniform multiple of the tile size, partial tiles are used at the edges.) The image data for each tile is compressed individually and can be decompressed individually. The default value of 256 is recommended. Optimize images only if there is a reduction in sizeWhen selected, if the image settings will cause an increase in the file size, optimization of that image is ignored. To ensure an exact match to the source document, it is a good idea to embed all the fonts used in the document. If you don't need an exact match and prefer a smaller file, you can choose not to embed fonts for Roman text and East Asian text (Traditional Chinese, Simplified Chinese, Korean, and Japanese). Text in these languages is replaced by a replacement font when viewed on a system that does not have the original fonts. The Fonts panel of the PDF Optimizer contains two lists of fonts: fonts that are available for outcome and fonts to play. Some fonts are not available for outcome and do not appear in the Fonts panel. To discover fonts in a document, select one or more fonts from the Embedded Fonts list and click the Unembed button. If you do not want to embed subsets of embedded fonts, deselect Subset of all Embedded. To avoid deendance of all fonts in the document, select Do not de-de-source any fonts. If your PDF includes artwork that contains transparency, you can use presets in the PDF Optimizer Transparency panel to flatten transparency and reduce file size. (Flattening incorporates transparency into the corresponding artwork by sectioning it into vector-based areas and rasterized areas.) rasterized.) Optimizer applies transparency options to all pages in the document before applying other optimization options. If you select Acrobat 4.0 and later compatibility settings, the Transparency panel is enabled and all file transparency is docked during optimization. This ensures compatibility with Acrobat 4.0 and earlier, which does not support transparency. When you create flattening presets, they appear with the default presets in the Transparency panel. Note: Transparency coupling cannot be undone after saving the file. The Discard Objects panel lets you specify objects to remove from the PDF and allows you to optimize curved lines in CAD drawings. You can discard objects created in Acrobat and other applications. Selecting an object removes all occurrences of that object within the PDF. In the Discard Objects area, you can select between these and other options: Discard all form submission, Import and reset actionsDisable all actions related to sending or importing form data, and reset form fields. This option preserves the form objects to which the actions are linked. Makes form fields unusable without changes in their appearance. The form data is combined with the page to become page content. Discard all JavaScript actionsDeletes any actions in the PDF that use JavaScript. Discard all alternate imagesDeletes all versions of an image except for on-screen viewing. Some PDF files include multiple versions of the same image for different purposes, such as low-resolution on-screen viewing and high-resolution printing. Discard Embedded Page ThumbnailsRemoves embedded page thumbnails. This is useful for large documents, which can take a long time to draw page thumbnails after you click the Page Thumbnails button. Removes labels from the document, which also eliminates accessibility and reflow capabilities for text. Convert Soft Lines to CurvesReduces the number of control points used to create curves in CAD drawings, resulting in smaller PDF files and faster on-screen rendering. Detect and merge image fragmentsIn searches for images or masks that fragment into thin slices and attempts to merge slices into a single image or mask. Discard Embedded Print SettingsDeletes embedded print settings, such as page scaling and duplex mode, from the document. Discard Embedded Search IndexRemove embedded search indexes, reducing file size. Removes all bookmarks from the document. Use the Discard Data pane to delete any personal information that you do not wish to distribute or share with others. If you can't find personal information, it may be hidden. You can search for hidden text and user-related information by using the Browse Document command (Tools &gt; Compose &gt; Disinfect Document, and then choose Remove Hidden Information). Discard All Comments, Forms, and Media Removes all comments, forms, form fields, and media from the PDF. Discard document information and metadata Delete document information dictionary and all metadata streams. (Use the Save As command to restore metadata streams to a copy of the PDF.) Discard All Object Data Deletes all objects in the PDF. Discard Attachments Deletes all attachments, including attachments added to the PDF as comments. (PDF Optimizer does not optimize attachments.) Discard External Cross-References Removes links to other documents. Links that jump to other locations within the PDF are not deleted. Discarding private data from other applications deletes information from a PDF document that is only useful for the application that created the document. This does not affect the functionality of the PDF, but reduces the file size. Discarding hidden layer content and flattening visible layers Decreases the file size. The optimized document looks like the original PDF, but does not contain any layer information. The Clean panel options in the PDF Optimizer dialog box allow you to remove useless items from the document. These elements include items that are obsolete or unnecessary for the intended use of the document. Deleting certain elements can seriously affect the functionality of the PDF. By default, only items that do not affect functionality are selected. If you are unsure of the implications of deleting other options, use the default selections. Object compression optionsSpecifies how to apply Flate compression to the file. Use Flate to encode unencoded sequences Accelerates Flate compression across all unencoded streams. For Streams That Use LZW Encoding, use Flate InsteadApplies Flate compression to all content streams and images that use LZW encoding. Discard invalid bookmarksRemoves bookmarks that point to pages in the document that have been deleted. Deletes links that jump to invalid destinations. Discard named targets without referenceRemoves named targets that are not referenced internally from the PDF document. Because this option does not check for links to other PDF files or websites, it does not fit in some workflows. Converts all end-of-line characters to space characters, which improves Flate compression. Optimize the PDF for a quick web viewRestructures a PDF document for page-to-page download (byte service) from web servers. Fast Web View Restructures a PDF document for page-to-page (byte service) download from web servers. With Fast Web View, the web server sends only the requested page, rather than the entire PDF. This option is especially important with large documents that can take a long time to download from a server. Check with your webmaster to make sure that the web server software you use supports downloading page by page. To ensure that PDF documents on your website appear in older browsers, you can also create HTML links (versus ASP scripts or the POST method) to PDF documents and use relatively short path names (256 characters or less). Open the PDF in Acrobat and choose &gt; File Properties. Look at the in the Description pane of the dialog box for quick web view settings (Yes or No). Follow this procedure to ensure that you have Acrobat configured to enable Quick Web View during the PDF creation process. In the Preferences dialog box, under Categories, select Documents. On the right side of the dialog box, under Save Settings, make sure Save As Optimizes for Quick Web View is selected and click OK. Choose File &gt; Save As. Select the same file name and location. When you see a message asking if you want to overwrite the existing file, click OK Note: In Acrobat Pro, you can also quickly enable Quick Web View on entire folders of Adobe PDF files by using the Prepare for Web Publishing action. See Execute an Action.
